including those applicable to software that makes use of encryption technology.

Use Amazon Maps Redirection

Amazon devices do not support the Google Maps API. However, the Amazon Maps API provides interface parity with the Google Maps v1 API. By using Amazon Maps Redirection, you can automatically redirect Google Maps v1 API calls from your app to the Amazon Maps API, providing a seamless maps experience in your app with no coding changes. The redirection occurs ONLY on Amazon devices. Portions of the Amazon Maps API are provided by HERE North America, LLC ("HERE"). Your use of Amazon Maps Redirection is subject to the terms of the [Amazon Maps Schedule](#), including the [HERE Materials Terms and Conditions](#).

Quickly distribute your app to a predefined set of app testers on the Amazon Appstore before going live.
